PS FLEXIBLE SOFT

Front Projection White Fabric

The PS Flexible Soft Screen uses a specialized PVC composite with <1-micron diamond optical micro-grooves, delivering true 4K clarity with no loss of detail. Its precisely calibrated 6000 K white base maintains color deviation within ± 60 K, producing a clear, haze-free image with rich depth and natural tones. Soft, balanced brightness helps reduce eye fatigue for extended viewing comfort.

<1 Micron Diamond Optical Texture

● Reliable in Any Environment

The advanced PVC material is inherently mold-resistant, moisture-resistant, and easy to clean. It does not yellow, curl, or age over time, maintaining excellent flatness in both humid and dry conditions.

● High Color Accuracy

99% color reproduction
Preserves fine tonal transitions and image depth with exceptional fidelity

● Enhanced Viewing for All Scenarios

With a 1.3 gain, the PS fabric compensates for mid/long throw brightness loss while keeping reflections balanced and color-accurate. A 130° wide viewing angle ensures consistent brightness and color from nearly any seating position.

Fabric Model	 Luminance Gain	 Visual Angle	 Color Restoration	 Mildew Proof	 Moisture Proof	 Scrubbing	 Environmental Protection	 Vicata	 Fireproof Level	Maximum Width
