

# WW5

## PS FLEXIBLE SOFT

Front Projection White Fabric

The WW5 Flexible White Fabric is made from a specialized PVC composite base material and finished with a micron-level precision rolling process. Its micro-diamond optical texture produces uniform diffuse reflection, ensuring stable brightness and color from multiple viewing angles. The composite structure provides excellent tensile resistance and deformation control, allowing the fabric to remain flat even after long-term hanging. Combining strong image performance, durability, and high value, WW5 is suited for home use, office presentations, and various projection environments.

### ● Strong Environmental Adaptability

Specialized PVC material is naturally mold-resistant, moisture-resistant, and easy to clean  
Resists yellowing, curling, and aging during long-term use or storage  
Maintains stable flatness in both humid and dry environments

### ● High Color Accuracy

1.0 gain provides natural, clear light reflection  
97% color reproduction maintains vivid, natural tones with rich detail

### ● 160° Ultra-Wide Viewing Angle

Provides clear and uniform image quality from virtually any viewing position

Fabric Model	Luminance Gain	Visual Angle	Color Restoration	Mildew Proof	Moisture Proof	Scrubbing	Environmental Protection	Vicata	Fireproof Level	Maximum Width
